

## Successful cooperation between GOEBEL IMS and the Chinese BOPET producer Zheijiang Yongsheng Technology Co., LTD.

Calcinatè/ Darmstadt, July 2022 - **Zheijiang Yongsheng Technology Co., LTD.** is one of the leading companies in the Chinese market for the production and sale of BOPET film products. The cooperation with IMS TECHNOLOGIES' brand **GOEBEL IMS**, a worldwide leader in building **converting machinery**, had its starting point at the end of 2018, with the order of two new primary slitter rewinders for BOPET converting.

The project included a **MONOSLIT OPTICAL 6000 BOPET**, which is a fully electrical high-end machine for converting technical films such as optical grade films. With the multi-functional slitting unit (including shear cutting) and optional by-pass spreader roller, the machine can convert thin as well as thick films. With special surface coatings for the guide rollers and the possibility to install web-cleaning devices and other special units, like an ultra-sonic knurling device, a big variety of applications can be covered.

The second machine for this project was a **MONOSLIT 9000 BOPET** which is designed for high-speed converting of mainly packaging grade films (the machine speed is 1200 m/min).

Both machines were delivered at the beginning of 2020 and successfully brought into production, despite the difficulties caused by Covid-19 pandemic.

Tobias Lankswert, Managing Director of GOEBEL Schneid- und Wickelsysteme GmbH and Sales Director Film adds: *"This was only possible thanks to the support of our Chinese Team as well as the great cooperation with the experienced operators of Yongsheng. It was a completely new situation for us and if for the first machine we still had some German colleagues at the customer's site, we had to install and start-up the second machine completely with our local team. Therefore, it was a great success to deliver and start up the lines on time, to finally ensure a successful project for our partner. We are looking forward to continuing this great cooperation with Yongsheng."*

As a matter of fact, a new agreement including two additional primary slitter rewinders - **MONOSLIT 9000 BOPET** and **MONOSLIT GIANT 11000 BOPET** – has been signed, thus confirming Yongsheng's satisfaction with GOEBEL IMS technology and quality.

Mr. Xu Yongming (General Manager of Zheijiang Yongsheng) adds: *"We are very happy with our decision and to have GOEBEL IMS as a reliable partner on our side. Even in these difficult times we always got the full support from GOEBEL IMS and managed a successful start-up of the first two projects. Therefore, we decided to continue our partnership and we ordered two additional GOEBEL IMS primary slitter rewinders, another MONOSLIT 9000 BOPET and a MONOSLIT GIANT 11000 BOPET for our first 10.6m BOPET production line. We are looking forward to continuing this fruitful partnership too."*
